## Executive Summary

This report summarizes the results of a green jobs survey of employers in Pennsylvania. The primary goals of the survey were to identify the number and type of green jobs that exist within the state's economy and to forecast changes in green jobs based on employers' two-year projections. The survey builds upon related research conducted earlier this year that helped to define and identify the kinds of industries and occupations that characterize the green economy, while also clarifying the needs and challenges for the state's green workforce.

## What is a Green Job?

Foundational work conducted by the Department of Labor \& Industry included reviews of relevant research and discussions with industry that resulted in a definition of green jobs for Pennsylvania. The final definition was reviewed and confirmed by industry employers. During the survey process, employers were asked to review the definition of green jobs and self-report how many of their employees were working in the core green areas described below.

Green jobs are jobs that employ workers in producing or offering products or services that:

- Promote energy efficiency
- Contribute to the sustainable use of resources or renewable energy
- Prevent pollution

Clean up the environment
Promote the reduction of harmful emissions
Provide green education/training, awareness, or compliance

## Study Results

The study relied on scientific survey design and procedures to measure employment in green jobs. A total of 14,619 employers covering all of the state's industries participated in the survey. The survey results were subsequently weighted to represent the distribution of green jobs across the broader population of employers. This enabled the computation of statewide estimates of green jobs by industry sector and occupation.

The results show an estimated 183,029 green jobs in Pennsylvania, which account for 3.4 percent of the total employment in the state. Green jobs are found in each of the six core areas represented in the state's definition, and these jobs are found in varying concentrations in all industries in the state. One out of every five responding companies employs workers in green jobs, and small companies with less than 50 employees report that they have green jobs more often than large firms.

Green jobs exist in all industry sectors of Pennsylvania; however, the bulk of this employment occurs in relatively few sectors. The top six industries account for three-quarters of all green jobs; the three largest industries - construction, manufacturing, and professional, scientific \& technical services - account for more than half of all green jobs. As a percent of total employment, the proportion of green jobs varies greatly by industry sector, from a high of nearly 19 percent for construction, to a low of just onetenth of one percent in the health care \& social assistance industry sector.

Green jobs also tend to be concentrated within relatively few occupations. The top 25 occupations include more than half of all green jobs in the state. The top five occupations combined constitute about one-fifth of all green jobs: production workers; heating, air conditioning \& refrigeration mechanics \& installers; carpenters; electricians; and retail salespersons.

## Growth in Green Jobs

Overall, employers estimate green job growth at 6.2 percent annually over the next two years, resulting in 23,232 positions. Growth is forecast across most green occupations, with increases expected in 20 of the 25 most common green jobs. This growth forecast may be due to an increase in new green jobs, a shift in the work of existing employees into jobs considered green, or both. These forecasts probably reflect a conservative estimate, since the survey does not take into account openings due to attrition and retirements. Also, no attempt was made to estimate additional jobs through indirect or induced employment that may be associated with current or future employment in green jobs.

## Profiles of Green Core Areas

The energy efficiency core area accounts for more than one-third of all green jobs $(65,137)$. The construction industry sector was the largest employer in this core area, with almost 42 percent of these green jobs. Heating, air conditioning, \& refrigeration mechanics \& installers are the occupation with the largest number of jobs in this core area.

Resource sustainability/renewable energy is the second-largest core area, with 41,141 green jobs, or 22.5 percent of the total. Manufacturing was by far the largest employer in this core area, with more than 40 percent all green jobs. Production worker was the most common occupation, accounting for nearly 15 percent of sustainability/ renewable energy jobs.

Pollution prevention accounts for 16.7 percent of green employment in the state, with an estimated 30,566 jobs. Green jobs are most numerous in the manufacturing, construction, and professional, scientific, \& technical services industry sectors. Production workers and refuse \& recyclable material collectors constitute the largest green occupations.

Green education/training or compliance constitutes 13 percent of all green jobs $(23,991)$. One third of these jobs are in public administration, and 18 percent are in professional, scientific \& technical services. The most common occupation in this core area is elementary school teachers (except special education), with nearly 16 percent of these jobs. These teachers often instruct students in green-related subject areas such as general science, biology, or environmental studies, for instance.

Environmental cleanup accounts for 6.4 percent of green jobs (11,672). One-quarter of the environmental cleanup jobs are in the professional, scientific \& technical services industry sector. Refuse \& recyclable material collectors account for nearly 11 percent of the jobs in this core area.

Harmful emissions reduction has the smallest number of green jobs among the six core areas (10,522), accounting for 5.7 percent of the state's green employment. Transportation \& warehousing, and retail trade each cover roughly one-quarter of all jobs in this core area. Automotive service technicians \& mechanics account for 28 percent of all jobs in this core area.

## Regional Differences in Green Jobs

Green jobs exist in all Workforce Investment Areas (WIAs), though there is wide variation in the number and percentage of green jobs by region. This variation likely reflects differences in regional economic conditions including geographic location, population density, industry mix and the labor markets that characterize each WIA.

The Three Rivers WIA has the most current green jobs $(18,318)$ and the second highest employment forecast, with an additional 4,052 green jobs expected within two years. In contrast, employers in the Northern Tier WIA reported the fewest green jobs, at 2,021 . Several WIAs have green employment that is heavily based in a single core area:

In the West Central WIA, 69.9 percent of green employment is in pollution prevention.
In the Northwest WIA, 57 percent of green employment is in energy efficiency.
More than half of all green employment in the Lancaster County WIA is in resource sustainability/renewable energy.
As a percentage of total employment, green jobs average 3.4 percent of employment across all WIAs in the state. Green jobs represent 6.8 percent of total employment in the Southern Alleghenies WIA, the largest proportion of any WIA. Conversely, in the Philadelphia County WIA, only 1.3 percent of regional employment is in green jobs.

## Certification Skills

The survey asked employers to report the certifications, green skills and basic skills needed for their green workforce.
Certifications: Overall, 5.7 percent of the employers with green jobs reported that they have a work-related certification. The industries with the most certifications were professional, scientific, \& technical services ( 13.5 percent of the employers in this industry sector) and construction ( 12.5 percent). Often these certifications were not unique to employees in green jobs, and many certifications cut across multiple industries.

Green Skills: The skills cited by employers varied widely by industry sector. Employers in construction and professional, scientific \& technical services reported the greatest number and variety of green skills. Many employers interpreted the question on green skills to include general knowledge requirements for their green workforce (such as existing laws and regulations), as well as specific work skills.

Basic Skills: The basic skills reported by employers are very similar to the skills needed by all employees in the industry sector, whether green or not. In general, employers' responses ranged from personal attributes and general aptitudes to academic skills, college degrees and licenses

## Future Research

The survey design establishes a reliable scientific foundation for identifying green jobs in Pennsylvania. As with any research project, there are opportunities for improvement and enhancement, including the following:

- Repeat the green jobs survey every two to three years in order to assess growth in green jobs and the industries that support them.
- Refine the survey instrument so that specific occupations can be linked to industry certifications, basic skills and green skills needed by employers and the workforce.
- Continue to conduct targeted studies by core area and industry sector to determine key growth factors and the education and training needs of employers and employees in the green economy.
- Compare and contrast the findings of this and future green jobs research to the broader economy to assess the total economic effects of green jobs and industry growth in different regions of the state.

## Introduction

This report summarizes the results of the Commonwealth of Pennsylvania Green Jobs Survey. The primary goal of the survey was to identify the number of green jobs that exist within the state's economy, and to establish a baseline measure that can be used to track industry and job growth over time. The survey builds upon related research conducted earlier this year that helped to define and identify the kinds of industries and occupations that characterize the green economy, while also clarifying the needs and challenges of the state's green workforce. ${ }^{1}$

Pennsylvania's effort to improve its information on green industries and jobs is a part of Pennsylvania's Labor Market Improvement Grant, a $\$ 1.25$ million competitive American Recovery and Reinvestment Act (ARRA) grant awarded to the Pennsylvania Department of Labor \& Industry. A core goal of this grant is to reduce the gap between traditional labor market data and the information needs of employers, educators and workers. Pennsylvania wants the additional green labor market data it collects to support better decisions by public and private-sector partners about economic development activities and investments in education, training and careers that prepare Pennsylvania's green workforce for the future.

Over the past five years, Pennsylvania has established an active network of more than 70 industry partnerships that bring together employers (and, in some cases, labor unions) to identify common skills requirements in key industries and to communicate those needs to stakeholders to guide policy and program decisions to support development of the state's green economy. Eight of Pennsylvania's industry partnerships have already delivered green training to meet growing markets and workforce demand in clean manufacturing, construction, energy efficiency and utilities.

It is anticipated that the new labor market information contained in this report, in combination with other research by the Pennsylvania Department of Labor \& Industry's Center for Workforce Information \& Analysis, will provide a valuable benchmark for understanding the current composition of the state's green economy as well as helping to guide future efforts to support future growth in green jobs across Pennsylvania.

## Defining Green-Economy Jobs

Foundational work conducted by the Department of Labor \& Industry included reviews of relevant research and discussions with industry that resulted in a definition of green jobs for Pennsylvania. Preliminary versions of the definition were reviewed and modified based on additional input from employers, research experts and stakeholders, resulting in the following definition:

Green jobs are jobs that employ workers in producing or offering products or services that:

- Promote energy efficiency
- Contribute to the sustainable use of resources or renewable energy
- Prevent pollution
- Clean up the environment
- Promote the reduction of harmful emissions
- Provide green education/training, awareness, or compliance

The final definition was reviewed and confirmed by industry employers. During the survey process, employers were asked to review the definition of green jobs and self-report how many of their employees were working in the green core areas described above. Employers' identification of green jobs in their own organizations was a central focus of the study.

## The Context for Green-Economy Jobs

The Pennsylvania Green Jobs Report, Part 1 defined green jobs, identified five broad industry sectors and projected $\$ 10$ billion in public and private investment in the state's green economy. While this report provided baseline information, critical questions remained unanswered. The purpose of the Green Jobs Survey is to follow up on this initial research

1 The Pennsylvania green jobs report, part 1, January 2010: Pennsylvania Department of Labor and Industry; Greening Pennsylvania's labor market information: Findings from listening sessions with employers and educators, June, 2010: Pennsylvania Department of Labor and Industry.
in order to answer several questions relating to the green economy: Where are Pennsylvania's green employers now and in two years from now? What jobs are green and what is the demand? What skills and certifications are associated with these jobs?

This survey is one component of an overall effort of the Pennsylvania Department of Labor \& Industry to gain a better understanding of the green economy and to generate industry-level information on green jobs and document occupational demand and skill requirements necessary to target training to green industries' needs. In addition to the survey, Pennsylvania has held seven Listening Sessions with employers and educators to gain first hand, personal accounts of how the emergence and growth of the green economy has affected those individuals and their organizations. A Jobs Tasks Analysis was also conducted of emerging and evolving green occupations to determine green career pathways. Additionally, an Inventory of Green Education and Training Capacity is being conducted to determine if Pennsylvania has the ability to meet the demands of the green economy.

Ulitimately, all of these efforts will culminate in the development and deployment of a Green Career Tool designed to assist job seekers in finding employment in the green economy. This tool will serve as a comprehensive resource containing all relevant data collected by Labor \& Industry on the green economy, in order to aid job seekers in making informed career and educational decisions.

## Methodology

The research team determined that accurately identifying and measuring green jobs and industry-sector trends called for a rigorous survey design and sampling method that would establish baseline estimates of green employment that could be used to track green jobs over time.

## Survey Protocol Development

Referencing the state's definition and the six core areas for green jobs, the survey asked employers to identify how many of their employees currently work in green jobs by job title. Employers were responsible for identifying which of their jobs were green jobs. Employers were also asked to estimate the number of employees in each job title they expect to have in two years. The survey further asked employers to list any specific green skills, basic skills and certifications needed among employees that constitute their green workforce. Following completion of the survey process, existing data on industry-sector type, occupation and geographical location were integrated into the database to enable breakout analyses of the results for these variables.

The six-category green jobs definition was used to design the survey and was the basis for collecting information about occupational titles and estimating the number of green jobs by industry sector. The definition allowed for the inclusion of direct green jobs (employees who directly produce a green product or provide a service - such as solar panel technician or an environmental engineer) as well as some occupations that support green economy growth - such as educators or trainers. Prior research identified a series of industry sectors and sub-sectors that were expected to hold the majority of green jobs. ${ }^{2}$ This study confirmed that, in most cases, these selections were correct.

## Survey Administration

The study relied on a written survey form mailed to Pennsylvania employers in early June 2010. A follow-up mailing and up to three additional phone calls and email contacts were made during the study period. The phone contacts produced the highest number of responses, as would be expected in a survey of this complexity. Towards
the end of the survey period, industries or WIAs responding at lower than optimal rates were given additional staff attention to produce a more even response across all analysis categories.

The first procedure in the survey process was to update address and phone number information in the sample database. Only a "place of business" contact was utilized; legal and accounting firms, noted in the sample as representing the respondent, were not surveyed. The Detailed Methodology in the Appendix describes the sampling procedures for this survey.

The survey response database was edited daily during the data collection period. This reduced the number of questions needing attention at the end of the collection period. The database was further edited prior to the start of SOC (occupational) coding. The fully coded file was then given a final round of edits prior to submittal to staff producing the employment estimates.

## Participation Rate

The sample included private and public-sector employers representing all industry sectors in Pennsylvania. A total of 14,619 usable surveys were received, which represents a participation rate of over 64 percent.

## Data Analysis

Nearly 21 percent of the 14,619 employers who submitted usable surveys reported that they had employees in green jobs that related to one or more of the six core areas identified in the state definition. The survey results were subsequently weighted using standard statistical methods to represent the relative distribution of green jobs across the broader population of employers. This approach enabled the computation of statewide estimates of the number of green jobs by industry sector and occupation.

For further explanation of the procedures used in the study, please refer to the Detailed Methodology section in the Appendix.

[^0]
## Study Resulis

## Study Results

This survey provides an overview of green jobs in Pennsylvania. It pinpoints where green jobs currently exist and how employers expect them to change. The survey results describe how green jobs are distributed across industries, occupations, and regions of the state. The results are presented below, with separate sections covering each of the following topics in turn:

- Distribution of green jobs among green core areas
- Green jobs by company size
- Summary of green jobs by industry sector
- Summary of green jobs by occupation
- Green employment forecasts by occupation
- Breakdowns of green jobs by Workforce Investment Area
- Skills and certifications for the green workforce

Each of the sections provides tables or graphs and accompanying narrative highlighting the main findings. Following the study results, the conclusions chapter summarizes the findings and offers recommendations for future research.

## Green Core Areas and Employment

Table 1 shows the number of green jobs and how they are distributed across the six green core areas. There are an estimated 183,029 green jobs in Pennsylvania, which account for 3.4 percent of the total employment in the state. ${ }^{3}$

The data show that green jobs are not evenly distributed across the core areas. In fact, the top three core areas together account for 75 percent of all green jobs. The leading core area is energy efficiency, with more than one-third of green employment. Resource sustainability/ renewable energy ( 22.5 percent) and pollution prevention (16.7 percent) round out the top three core areas. Jobs in green education, training or compliance are slightly less common, at 13.1 percent of all green jobs. Environmental cleanup ( 6.4 percent) and harmful emissions reduction (5.7 percent) represent the core areas with the fewest jobs.

## Green Jobs by Company Size

Overall, roughly one out of every five companies in Pennsylvania (20.6 percent) employed workers in green jobs. ${ }^{4}$ In general, smaller companies - those with fewer than 50 employees - were more likely to report having green employment than the larger companies (Figure 1).

## Table 1

Green Jobs by Core Area

|  | GREEN JOBS |  |
| :--- | :---: | :---: |
| CORE AREA | NUMBER | PERCENTAGE |
| Energy Efficiency | 65,137 | $35.6 \%$ |
| Resource Sustainability/Renewable Energy | 41,141 | $22.5 \%$ |
| Pollution Prevention | 30,566 | $16.7 \%$ |
| Green Education/Training or Compliance | 23,991 | $13.1 \%$ |
| Environmental Cleanup | 11,672 | $6.4 \%$ |
| Harmful Emissions Reduction | 10,522 | $5.7 \%$ |
| Total | 183,029 | $100.0 \%$ |

3 Total employment is based on 2009 fourth quarter covered employment among the universe of employers used for sampling. This file excluded NAICS $922 x x x$ and 814110 . Covered employment means jobs that are covered by unemployment insurance.

4 Green employment by company size is based on raw numbers, not weighted estimates. For further details by company size, please see Table 14.

Figure 1
Percentage of Companies with any Green Employment by Company Size

Twenty-two percent of the smaller companies had green employment, compared to 16 percent of the companies with at least 50 employees. (See Table 14 in the Appendix for further details.)

## Green Employment Industry Sector

Green jobs exist in all industry sectors of Pennsylvania; however, the bulk of this employment occurs in relatively few sectors. Figure 2 shows that the top six industries account for three-quarters of all green jobs. In fact, construction, manufacturing, and professional, scientific \& technical services alone account for more than half of all green jobs.

Figure 2
Distribution of Green Jobs by Industry Sector

1. Construction: Firms in this industry sector offer services such as residential remodeling, new single family housing construction, commercial \& institutional building construction, and water \& sewer line construction. Construction accounts for both the largest number of green jobs $(41,581)$ and the largest percentage of green jobs (22.7 percent) among all industries. As shown in Figure 3, construction also has the greatest proportion of green jobs among all industry-sector employment: Almost 19 percent of all construction jobs are green jobs. The core area of energy efficiency is the largest share of green jobs in construction, with 65.5 percent of green employment (Table 15). ${ }^{5}$
2. Manufacturing: This industry sector includes firms that fabricate and assemble a wide variety of products. Manufacturers responding to the survey produced a wide range of products, including heating equipment, iron \& steel mills, semiconductors and paper envelopes. Manufacturing accounts for the second largest number of green jobs ( 37,757 ), accounting for 20.6 percent of the total. While manufacturing produces a significant number of green jobs, this does not necessarily represent a large proportion of the total employment in manufacturing. This is a large sector of the state economy, with total industry sector employment of more than 560,000 , but green jobs are less than 7 percent of all manufacturing employment (Figure 3). Table 15 shows that the two core areas that account for the majority of green employment in manufacturing are energy efficiency ( 32.4 percent) and resource sustainability/renewable energy (44.6 percent).
3. Professional, Scientific \& Technical Services: This industry sector classification includes a diverse set of firms, including those offering architectural, landscaping, legal and engineering services. The professional, scientific \& technical industry sector accounts for 12 percent of all green jobs $(21,918)$. Perhaps reflecting the variety of firms grouped in this industry sector, green employment is split between several core areas (Table 15). The top two core areas represented by this industry sector include energy efficiency (28.6 percent) and green education/training or compliance (20.1 percent). Overall, green jobs are 7.3 percent of the employment in this industry sector (Figure 3).
[^1]
## Study Results

When considering all employment in an industry sector - both green and non-green - the proportion of green employment varies widely across the industries. At the upper end of the scale is construction. As noted earlier, almost one in every five construction jobs is a green job ( 18.8 percent), the highest proportion of any industry sector. Three other industries also have at least 10 percent green employment (Figure 3).

Figure 3
Green Jobs as a Percentage of Each Industry Sector's Employment

(Note: Chart displays industries with at least $5 \%$ green employment)

In contrast, only 0.1 percent of the health care \& social assistance industry sector employment is reported to consist of green jobs, the smallest proportion of any industry sector. Six other industries have less than 2 percent green employment (Table 2).

Detailed green employment industry-sector information is presented in two separate tables. Table 2 provides the distribution of green jobs across 20 NAICS industry sectors. While green jobs appear in all industry sectors, there is quite a bit of variation in the proportion of green employment within each industry sector.

Table 2
Green Employment in 20 NAICS Industry Sectors

The relationship between industries and the green core areas appear to be fairly consistent with what might be expected. Table 3 shows how many green jobs are in each of the six green core areas by industry sector (see Table 15 for percentages). Most of the green jobs in educational services, for instance, are in the green core area of education, training or compliance. Likewise, it is logical that harmful emissions reduction would be the most common core area applying to jobs in transportation \& warehousing.

[^2]Table 3
Green Core Area Employment in 20 NAICS Industry Sectors

|  |  | GREEN JOBS BY CORE AREA |  |  |  |  |  | TOTAL |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| NAICS | INDUSTRY SECTOR |  |  |  |  |  |  | $\begin{gathered} \text { GREEN } \\ \text { JOBS } \end{gathered}$ | PERCENT <br> OF TOTAL <br> GREEN <br> JOBS |
| 23 | Construction | 27,216 | 4,768 | 4,522 | 1,989 | 924 | 2,162 | 41,581 ${ }^{7}$ | 22.7\% |
| 31-33 | Manufacturing | 12,246 | 16,828 | 6,288 | 504 | 615 | 1,276 | 37,757 | 20.6\% |
| 54 | Professional, Scientific, \& Tech. Services | 6,273 | 3,930 | 3,688 | 2,941 | 681 | 4,404 | 21,918 | 12.0\% |
| 44-45 | Retail Trade | 9,059 | 4,229 | 616 | 285 | 2,582 | 346 | 17,117 | 9.4\% |

| Percent |  | 35.6\% | 22.5\% | 16.7\% | 6.4\% | 5.7\% | 13.1\% | 100.0\% |  |

[^3]
## Green Core Area Occupations

On the survey, employers listed the job titles of employees working in positions related to the six green core areas. Based on these titles, all green occupations were classified within the list of standard occupational classification (SOC) codes. ${ }^{9}$ Instead of creating new green job titles, most employers used traditional titles to describe positions focused on producing or offering a green product or service. Even in a relatively new or emerging industry sector like renewable energy, jobs such as solar photovoltaic installer are now included in the SOC codes.

Given that construction and manufacturing industries constitute 44 percent of all green jobs, it is no surprise that occupations in these industries are well represented (Figure 4).

Figure 4
Top Green Occupations: Estimated Employment

Table 4 shows that green employment is concentrated into relatively few occupations (SOC codes). The top 25 occupations include more than half of the green jobs in the state. In fact, the top five occupations combined constitute about one-fifth of all green jobs. These top occupations are described in further detail as follows:

1. The occupation with the most green jobs is production workers, with 5.0 percent of the total green jobs in the state (estimated at 9,106 ). Two-thirds of these positions are in the core area of resource sustainability/renewable energy, and an additional one-quarter are in pollution prevention. On the survey, most employers simply used the generic term "production worker" for employees in this category. Thus, it was impossible to code them into more specific production occupation categories. Other job titles reported by employers that were grouped
in this category include "manufacturing production technician", "manufacturing laborer" and "machine operator". This occupation represents production work in many different sectors of the economy.
2. Heating, air conditioning, \& refrigeration mechanics \& installers is the second most common green occupation, with 4.3 percent of the total green jobs. Not surprisingly, the bulk of these positions ( 84.8 percent) are in the core area of energy efficiency. Examples of occupation titles provided by employers included in this category are "HVAC service technician", "HVAC specialist" and "HVAC installer".
3. The occupation with the third-highest number of green jobs is carpenters, at 4.4 percent of green employment in the state. Most of the carpenters ( 80.6 percent) work in the core area of energy efficiency. Occupation titles listed by employers in this occupation included "construction carpenters" and "home remodeler".
4. Electricians represent the occupation with the fourthhighest number of green jobs ( 3.3 percent). As might be expected, the vast majority of green jobs for electricians are in the core area of energy efficiency ( 91.5 percent). Employers used titles such as "electrician", "maintenance electrician" and "journeyman electrician" to describe workers in this occupation.
5. The occupation with the fifth-highest number of green jobs is retail salespersons ( 2.9 percent). These green jobs are split fairly evenly between the core areas of energy efficiency (48.7 percent) and resource sustainability/ renewable energy ( 43.0 percent). Employers identified green retail sales as being tied to the provision of green products, such as insulation, energy control systems and energy-efficient ('energy star') appliances. Employers most often used the titles "retail salesperson" and "sales representative" to describe this occupation. Employers listing green retail salespersons included department stores, electronics stores, automotive parts stores, new car dealers, and residential remodelers.

9 Federal statistical agencies use the Standard Occupational Classification (SOC) system to classify workers into standard occupational categories. For further information about the SOC system, please see the Bureau of Labor Statistics at http://www.bls.gov/soc/.

Table 4
Top 25 Occupations by Green Core Area Employment and Percent of Total Green Jobs

|  |  | GREEN JOBS BY CORE AREA |  |  |  |  |  | TOTAL |  |

[^4]
## Employment Forecasts for Green Occupations

Employers forecast how many employees they will have in two years (2012) in each occupation. Overall, employers estimate green jobs growing by 6.2 percent in the next two years, resulting in 23,232 positions. ${ }^{11}$ Growth is forecast across most green occupations, with increases expected in 20 of the 25 most common green jobs (Figure 5).

Table 5 presents the estimated annual growth rates and employment for the 25 occupations with the highest green employment in 2010.
It is important to note that forecast growth could have two different interpretations. An increase in the number of green jobs could mean that new jobs will be created. Alternately, the increase could include employees for whom green products and services will become a larger proportion of their duties. One interpretation denotes growth in employment, and the other indicates a shift in the primary responsibilities of existing positions.

These forecasts probably reflect a conservative estimate of the actual number of positions that could be available in the future, since the survey does not take into account openings due to attrition and retirements.

## Figure 5

Forecast Change in Green Jobs per Occupation within Two Years (2012)

${ }^{11}$ Due to the survey design, growth in green jobs may be slightly under-reported. Forecast employment was tied directly to current green occupations; thus, the survey did not capture employment forecasts for occupations that the employer did not have in 2010 but planned to add by 2012.

Table 5 shows that occupations related to construction and manufacturing figure prominently in the forecast for green jobs. The occupation expected to add the largest number of green jobs is electricians, an estimated 1,908 positions, or 14.9 percent growth. Employers of wholesale and manufacturing sales representatives (other than technical \& scientific products) forecast adding an estimated 1,700 positions, an increase of 30.1 percent. The occupation with the third-highest expected growth is carpenters, with 1,303 positions or 8.1 percent growth.

Table 5
Top 25 Green Occupations and Employment Forecasts, Growth Rates 2010 to 2012

| SOC | OCCUPATION TITLE | ESTIMATED GREEN JOBS IN 2010 | FORECAST GREEN JOBS IN 2012 | CHANGE IN EMPLOYMENT | ANNUAL GROWTH RATE |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 47-2111 | Electricians | 5,971 | 7,879 | 1,908 | 14.9\% |
| 41-4012 | Sales Reps., Whls. \& Manuf., exc. Tech. \& Scientific Prods. | 2,452 | 4,153 | 1,700 | 30.1\% |
| 47-2031 | Carpenters | 7,743 | 9,045 | 1,303 | 8.1\% |
| 49-9021 | Heating, Air Cond., \& Refrigeration Mechanics \& Installers | 7,932 | 8,878 | 946 | 5.8\% |
| 53-3022 | Bus Drivers, School or Special Client | 2,895 | 3,706 | 811 | 13.1\% |
| 17-2081 | Environmental Engineers | 2,644 | 3,240 | 596 | 10.7\% |
| 51-4199 | Metal Workers \& Plastic Workers, All Other | 3,336 | 3,878 | 542 | 7.8\% |
| 47-2061 | Construction Laborers | 4,612 | 5,122 | 509 | 5.4\% |
| 37-3011 | Landscaping \& Groundskeeping Workers | 3,130 | 3,602 | 472 | 7.3\% |
| 53-7062 | Laborers \& Freight, Stock, \& Material Movers, Hand | 2,395 | 2,779 | 384 | 7.7\% |
| 49-3023 | Automotive Service Technicians \& Mechanics | 4,877 | 5,260 | 383 | 3.9\% |
| 11-9021 | Construction Managers | 2,244 | 2,582 | 338 | 7.3\% |
| 17-1011 | Architects, except Landscape \& Naval | 2,542 | 2,869 | 326 | 6.2\% |
| 47-2152 | Plumbers, Pipefitters, \& Steamfitters | 4,023 | 4,330 | 306 | 3.7\% |
| 41-3099 | Sales Representatives, Services, All Other | 2,813 | 3,113 | 300 | 5.2\% |
| 43-9061 | Office Clerks, General | 2,594 | 2,828 | 233 | 4.4\% |
| 41-2031 | Retail Salespersons | 5,392 | 5,484 | 92 | 0.8\% |
| 53-7081 | Refuse \& Recyclable Material Collectors | 3,254 | 3,307 | 53 | 0.8\% |
| 53-3032 | Heavy \& Tractor-Trailer Truck Drivers | 2,789 | 2,822 | 34 | 0.6\% |
| 51-7042 | Woodworking Mach. Setters, Oprs., \& Tenders, except Sawing | 2,132 | 2,146 | 14 | 0.3\% |
| 49-9071 | Maintenance \& Repair Workers, General | 2,822 | 2,819 | -4 | -0.1\% |
| 17-2051 | Civil Engineers | 3,804 | 3,754 | -50 | -0.7\% |
| 25-2021 | Elementary School Teachers, except Special Education | 3,856 | 3,672 | -184 | -2.4\% |
| 53-3033 | Light Truck or Delivery Services Drivers | 2,529 | 1,972 | -557 | -11.7\% |
| 51-9199 | Production Workers, All Other | 9,106 | 7,705 | -1,401 | -8.0\% |
| Total |  | 97,890 | 106,946 | 9,056 | 4.5\% |
| Total of all Green Jobs by Activities |  | 183,029 | 206,261 | 23,232 | 6.2\% |
| Percent of Total |  | 53\% |  |  |  |

Although the occupation production workers (all other) is estimated to have the highest green employment in 2010, this is also the occupation expected to have the greatest loss of jobs ( $-1,401$ jobs or -8.0 percent). The only occupation with a bigger projected loss is light truck or delivery service drivers, at -11.7 percent of green employment, but since this occupation has a smaller base number of jobs, the total loss is estimated to be 557 jobs.

## Green Employment by Workforce Investment Area

Regional differences in green employment were examined by reviewing the results for Pennsylvania's 22 Workforce Investment Areas (WIAs). WIAs denote regional labor markets and are used to define local workforce characteristics. This section provides analysis of the current and forecast green employment in each WIA.

Figure 6
Workforce Investment Areas

$\left.\begin{array}{l|l|l}\text { Central } & \text { Northern Tier } & \text { Delaware County } \\ \text { South Central } & \text { West Central } & \text { Lackawanna County }\end{array}\right)$ Philadelphia County

## Distribution of Green Employment by Workforce Investment Area

Green jobs were reported for all of the WIAs, though there is wide variation in the number of positions and the extent to which green employment permeates each regional economy (Figure 7). The WIAs with the greatest numbers of green jobs are Three Rivers $(18,318)$ and South Central $(17,102)$. Employers in the Northern Tier WIA reported the fewest green jobs, at 2,021 .

## Figure 7

Green Jobs per Workforce Investment Area (WIA)

Several WIAs have green employment that is heavily based in a single core area. (See Table 12 in the Appendix for detailed breakdowns of employment within each core area.)

- In the West Central WIA, 69.9 percent of green employment is in pollution prevention.
- In the Northwest WIA, 57.0 percent of green employment is in energy efficiency.
- More than half of green employment in the Lancaster County WIA is in resource sustainability/renewable energy ( 50.5 percent).

As Table 6 shows, there is considerable variation in the percentage of WIA employment in green jobs. For example, green jobs represent 6.8 percent of the employment in the Southern Alleghenies WIA, the largest proportion of any WIA. At the other end of the spectrum is the Philadelphia County WIA, where only 1.3 percent of the employment is in green jobs.

Table 6
Green Employment by Workforce Investment Area (WIA)

| WORKFORCE INVESTMENT AREA | GREEN JOBS | ALL EMPLOYMENT REPORTED IN 2009 FOURTH QUARTER ${ }^{12}$ | GREEN JOBS AS A PERCENTAGE OF WIA EMPLOYMENT |
| :---: | :---: | :---: | :---: |
| Southern Alleghenies | 11,521 | 169,200 | 6.8\% |
| Lancaster County | 12,411 | 216,627 | 5.7\% |
| West Central | 3,807 | 75,105 | 5.1\% |
| Central | 11,739 | 238,845 | 4.9\% |
| Northwest | 9,121 | 200,323 | 4.6\% |
| Westmoreland/Fayette | 7,844 | 169,664 | 4.6\% |
| Chester County | 10,621 | 236,136 | 4.5\% |
| Lehigh Valley | 12,184 | 268,072 | 4.5\% |
| Berks County | 6,820 | 161,221 | 4.2\% |
| Lackawanna County | 3,910 | 98,355 | 4.0\% |
| Tri County | 5,105 | 129,268 | 3.9\% |
| Northern Tier | 2,021 | 53,306 | 3.8\% |
| North Central | 2,932 | 80,274 | 3.7\% |
| Luzerne/Schuylkill | 6,477 | 184,987 | 3.5\% |
| Pocono Counties | 3,390 | 96,595 | 3.5\% |
| Bucks County | 7,156 | 249,589 | 2.9\% |
| Montgomery County | 12,877 | 466,540 | 2.8\% |
| South Central | 17,102 | 610,014 | 2.8\% |
| Three Rivers | 18,318 | 666,505 | 2.7\% |
| Delaware County | 5,149 | 203,052 | 2.5\% |
| Other ${ }^{13}$ | 2,316 | 103,320 | 2.2\% |
| Southwest Corner | 2,592 | 145,058 | 1.8\% |
| Philadelphia County | 7,617 | 605,610 | 1.3\% |
| Total | 183,030 | 5,427,666 | 3.4\% |

[^5]
## Study Results

## Forecast Growth by Workforce Investment Area

As noted earlier, green jobs are projected to grow by 23,262 jobs ( 6.2 percent) within two years. Figure 8 shows that employers estimate that green employment will grow in all but three WIAs: Southern Alleghenies, Bucks County, and Northwest. The two WIAs that expect to gain the most new green jobs are Lehigh Valley $(4,179)$ and Three Rivers $(4,052)$.

Figure 8
Forecast Change in Green Jobs per Workforce Investment Area

As shown below in Table 7, half of the WIAs have estimated growth rates above the state average of 6.2 percent. The three WIAs with the highest projected growth rates are Lehigh Valley ( 15.9 percent), Philadelphia County ( 12.3 percent), and Tri County ( 12.1 percent). One interesting note is that while the Philadelphia County WIA currently has the smallest proportion of green jobs when compared to all employment in the WIA, it has the second-highest projected growth rate.

Table 7
Forecast Growth in Green Employment by Workforce Investment Area

| WORKFORCE INVESTMENT AREA | ESTIMATED GREEN JOBS IN 2010 | FORECAST GREEN JOBS IN 2012 | CHANGE IN EMPLOYMENT | ANNUAL GROWTH RATE |
| :---: | :---: | :---: | :---: | :---: |
| Lehigh Valley | 12,184 | 16,363 | 4,179 | 15.9\% |
| Philadelphia County | 7,617 | 9,612 | 1,995 | 12.3\% |
| Tri County | 5,105 | 6,411 | 1,306 | 12.1\% |
| Three Rivers | 18,318 | 22,370 | 4,052 | 10.5\% |
| West Central | 3,807 | 4,591 | 784 | 9.8\% |
| Northern Tier | 2,021 | 2,416 | 395 | 9.3\% |
| Delaware County | 5,149 | 6,028 | 880 | 8.2\% |
| Lancaster County | 12,411 | 14,409 | 1,998 | 7.7\% |
| Berks County | 6,820 | 7,846 | 1,026 | 7.3\% |
| Montgomery County | 12,877 | 14,768 | 1,891 | 7.1\% |
| South Central | 17,102 | 19,455 | 2,353 | 6.7\% |
| Lackawanna County | 3,910 | 4,366 | 456 | 5.7\% |
| Other | 2,316 | 2,562 | 246 | 5.2\% |
| Westmoreland/Fayette | 7,844 | 8,525 | 681 | 4.2\% |
| Luzerne/Schuylkill | 6,477 | 6,946 | 469 | 3.6\% |
| Chester County | 10,621 | 11,267 | 646 | 3.0\% |
| Pocono Counties | 3,390 | 3,560 | 170 | 2.5\% |
| Southwest Corner | 2,592 | 2,724 | 133 | 2.5\% |
| North Central | 2,932 | 3,032 | 100 | 1.7\% |
| Central | 11,739 | 11,788 | 49 | 0.2\% |
| Southern Alleghenies | 11,521 | 11,435 | -86 | -0.4\% |
| Bucks County | 7,156 | 6,899 | -257 | -1.8\% |
| Northwest | 9,121 | 8,670 | -450 | -2.5\% |
| State | 183,029 | 206,261 | 23,232 | 6.2\% |

## Certifications and Skills for the Green Workforce

The survey asked employers to report the certifications, green skills and basic skills needed for their green workforce. Because the survey question about skills and certifications was not associated with specific occupations, it is not possible to analyze the results by occupation. However, analysis was possible by industry sector, since each employer is identified with only one standard industry code (NAICS).

## Certifications for the Green Workforce

Employers provided examples of the certifications needed for their green workforce. In many cases, these were certifications needed by all employees in the occupation, not certifications specifically related to the green aspects of the jobs. Many certifications were associated with multiple industries. For instance, LEED AP certification was noted by employers from 10 different industries.

Figure 9 provides the percentage of employers in each industry sector reporting certifications, according to their two-digit NAICS industry classification. ${ }^{14}$ Overall, 5.7 percent of the employers with green jobs reported that they have a certification. The industries with the most certifications were professional, scientific, \& technical services ( 13.5 percent of the employers in this industry sector) and construction ( 12.5 percent).

Below are examples of certifications that employers listed within the top two industry sectors. Please see the Appendix for all certifications reported by employers in each NAICS industry sector.

Figure 9
Percentage of Employers Reporting Green Certifications by Industry Sector

${ }^{14}$ Data in figure is un-weighted and, therefore, may not necessarily reflect the broader industry population.

Professional, scientific \& technical services includes
firms offering architecture, landscape and engineering services. Common certifications mentioned by employers in this industry sector are as follows:

- LEED AP Certified
- Registered Architect
- Certified Landscape Architect, Registered Landscape Architect
- Certified Energy Manager
- Certified Planner
- EPA Certified
- Professional Engineer
- Water Treatment Plant Operator Certification

Construction includes firms offering services such as residential remodeling, new single family housing construction, commercial \& institutional building construction, and water \& sewer line construction. Common certifications reported by construction employers include the following:

## - LEED AP Certified

- LEAD Paint Certification
- National Association of Home Building Certified
- OSHA Certification
- Certified Electrician
- HVAC Certified
- Solar Certification
- EPA Refrigerant Certification
- Plumbing License
- Certified Energy Manager
- Green Advantage Environmental Certification

## Green Skills Needed by the Green Workforce

Employers also provided examples of the green skills needed by their green workforce (see Table 19 in the Appendix for examples of the types of green skills mentioned by employers within each industry sector). The green skills presented in this report should be viewed as a snapshot of green skills that are important to some employers, not a comprehensive overview of green skill requirements. Additional research (outside of this survey) is currently being conducted, which will provide more in-depth information about the evolving green skills needs of employers in Pennsylvania.

The number and content of responses to this survey question varied considerably by industry sector. Employers in construction and professional, scientific \& technical services reported the greatest number and variety of green skills. This may be expected, given that these two sectors represent large numbers of green jobs across a variety of occupations.

Many employers interpreted the question on green skills to include general knowledge requirements for their green workforce, as well as specific work skills. One trend that appeared across multiple industry sectors was the importance of employees understanding state and federal laws, policies, and regulations that apply to their jobs. Examples include laws regarding excavating, restoration, energy and lead, and regulations from the EPA and OSHA.

## Basic Skills Needed by the Green Workforce

In general, the basic skills needed by employees in green jobs are very similar to the skills needed by all employees in the occupation, whether green or not. Employers reported a wide variety of basic skills and knowledge, such as the following:

- Personal attributes (e.g., self-starter, dependable, hard worker)
- Physical attributes (e.g., able to work in heat, able to lift heavy items, high level of endurance)
- General aptitudes (e.g., mechanically inclined)
- Basic academic skills (e.g., reading, writing, math)

## Study Results

- Skills and knowledge specific to the occupation (e.g., backhoe operation, farm plant tending)
- Professional licenses (e.g., Electrical Contractor License, Emissions Inspection License, Wastewater Operator License)
- Academic degrees (e.g., Environmental Engineering Degree, Forestry Degree, Chemical Engineering Degree)

At first, it was somewhat surprising to see professional licenses and academic degrees included in this section. On further review, it appears that some employers also interpreted "basic skills" as the essential prerequisites of the job, not necessarily as simple, rudimentary academic skills (for examples of basic skills reported by employers in each industry sector, please see Table 20 in the Appendix).

## Conclusions

The primary goal of this study was to identify the number and type of green jobs in Pennsylvania. The intent was to identify and estimate the current composition of industries, employers and employment in green jobs across the state, and to forecast changes in green jobs based on employers' two-year projections. The scope of the study was limited to self-reported data collected directly from Pennsylvania employers.

The research design provides a statistically-sound foundation for measuring changes in industries and employment over time. The survey builds upon earlier green jobs research conducted by the Department of Labor \& Industry. ${ }^{15}$ The design can be expanded to incorporate new variables that are subsequently determined to be important to providing high-quality labor market information and guidance that can be used to support future development of green jobs and industries in Pennsylvania.

## Current and Future Employment in Green Jobs

The study estimates total statewide green employment of 183,029 across the six green core areas. Compared to all covered employment, green jobs account for only about 3.4 percent of the statewide total. Employers do anticipate growth in the numbers of green jobs in their organizations. Indeed, the employers participating in the survey estimated that over the next two years an additional 23,239 positions will exist beyond current levels. This general increase represents an annualized growth rate of 6.2 percent. Growth is expected to be widespread, occurring across a variety of occupations. In fact, 20 of the 25 most common green occupations are projected to either add new jobs or shift existing positions to job responsibilities that embody an increasingly green focus. Regionally, growth in green jobs is projected across all but three of the state's 22 Workforce Investment Areas.

The number of green jobs should be viewed as a conservative estimate for many reasons. First, employers completing the survey were directed to exclude consultants, outside contractors, vendors and others not considered

[^6]regular employees. Additionally, while the survey did include some public-sector jobs, not all government employment was included due to technical adjustments in the survey sample. Although the timing of the survey and seasonal employment fluctuations may have boosted identification of green jobs in some industries, it is also possible that the prolonged economic downturn, especially in large industries like construction and manufacturing, may have moderated the estimates for green jobs. Finally, the survey focused primarily on direct employment in green jobs, and no attempt was made to estimate additional jobs through indirect or induced employment that may be associated with current or future employment in green jobs.

## Green Job Characteristics

Green jobs have made a wide impact across the economy in Pennsylvania. They exist within all industries and regions of the state, though the majority of green jobs are concentrated within relatively few industries and occupations.

## Leading Green Industries

It is worth noting that a relatively small number of industries account for the largest total number of green jobs in the state. Similarly, only a handful of industries have large proportions of green jobs compared to total employment in the industry sector. Indeed, green jobs are more than 5 percent of total employment in only six of the state's 20 industries.

More than half of the green jobs in Pennsylvania occur within just three industry sectors: construction (22.7 percent), manufacturing (20.6 percent), and professional, scientific, \& technical services ( 12.0 percent). These three sectors are major employers in Pennsylvania, so it seems reasonable that they might account for a large proportion of green jobs. At the same time, however, there are also a disproportionate number of green jobs in these key industries. For example, construction accounts for roughly 4 percent of the state's total covered employment but almost 23 percent of green jobs. Similarly, manufacturing accounts for about 10 percent of the statewide employment but more than 20 percent of green jobs. Professional, scientific, \& technical services is close to 6 percent of the total covered employment but 12 percent of green jobs. Clearly, there is considerable variation in the proportion of green jobs within these industries.

Construction: Several factors likely contribute to the preponderance of green jobs in the three leading industry sectors. Construction may be affected by the growing influence of green building practices and Leadership in Energy Environmental Design (LEED) certified projects, which have been accompanied by a rapid growth in the availability and popularity of new green products and methods. Green jobs were reported by employers in residential new home construction and remodeling, commercial and institutional building construction, and construction related to power and communication lines, bridges and highways. The U.S. Green Building Council suggest that continued growth in green building is likely, and that recovery by the industry sector is likely to accelerate green building construction and new green jobs. ${ }^{16}$

Manufacturing: Statewide employment in this sector is large, exceeding half a million workers. This industry sector has also been greatly influenced by the increasing number and variety of green products that are a response to growing demand by consumers for environmentally-friendly goods. Shifting consumer expectations has created new markets for green products that pose business opportunities for manufacturers and employment growth. At the same time, many companies have adopted sustainable business practices that enable companies to reduce waste, use less energy and operate in a more environmentally-friendly fashion than in the past.

## Professional, scientific \& technical services: This

 industry sector includes a diverse mix of services, and its green jobs are quite different from one sub-sector to another. Employers participating in the survey include firms offering services in architecture, building inspection, engineering, environmental consulting, industrial design, interior design, scientific \& technical consulting, logistics consulting, surveying \& mapping, and testing. Many of the companies in this industry sector support the highly technical work of highly-trained professional employees such as engineers, consultants and architects. These companies often engage in research, new product development and technical expertise that is generally associated with innovative green products and services. Thus it seems reasonable to expect that this industry sector would be among the top industries that employ workers in green jobs.
## Leading Green Occupations

The concentration of green jobs in construction and manufacturing is also reflected in the occupations with the most green jobs: production workers $(9,106)$, heating, air conditioning \& refrigeration mechanics \& installers $(7,932)$, carpenters ( 7,743 ), and electricians $(5,971)$. With the exception of production workers, these occupations are also among those with the greatest projected growth rates over the next two years.

The projections suggest that employers expect to see growth in the number of new jobs or a continued shift of employees' work in support of green products or services. In several recent studies, employers in Pennsylvania have reported seeing job shortages in skilled blue collar occupations. ${ }^{17}$ Although the current economic recession has weakened employment demand in most skilled trade occupations, current skill gaps combined with projected increases in craft occupations such as electricians (by 1,908 jobs), carpenters ( 1,303 jobs) and other skilled trade jobs may portend future labor shortages in these key occupational groups.

## Profiles of Green Core Areas ${ }^{18}$

The energy efficiency core area accounts for more than one-third (35.6 percent) of all green jobs $(65,137)$. The construction industry sector was the largest employer in this core area, with almost 42 percent of green jobs. Manufacturing contributed 18.8 percent of the jobs in the energy efficiency sector, followed by retail trade (13.9 percent). The most common occupation with a primary focus on energy efficiency was heating, air conditioning, \& refrigeration mechanics \& installers, contributing more than 10 percent of the energy efficiency green jobs. Carpenters ( 9.6 percent) and electricians ( 8.4 percent) round out the top three occupations in this green core area.

[^7]The large number of energy efficiency-related green jobs is likely, in part, a function of the size and scope of the various industries that constitute this broad core area. Energy efficiency products and services support employment in several large industries, and these products and services have well-established markets and networks in all facets of construction, manufacturing and various professional and technical services companies and occupations.

Resource sustainability/renewable energy was the second-largest core area, with 41,140 green jobs, or 22.5 percent of the total. Manufacturing was by far the largest employer in this core area, with 40.9 percent of all green jobs. Next largest was construction (11.6 percent), followed by retail trade ( 10.3 percent) and professional, scientific \& technical services ( 9.6 percent). Production workers (all other) was the most common occupation, accounting for 14.7 percent of the resource sustainability/ renewable energy jobs $(6,050)$. Since many of the companies and occupations engaged in resource sustainability and renewable energy projects involve the production of sustainable products and the provision of services such as those needed to design, engineer and construct renewable energy facilities, the distribution of industries and job types in this core area appear to be well aligned.

Pollution prevention accounts for 16.7 percent of green employment in the state, with an estimated 30,566 jobs. No single industry sector captured the bulk of the pollution prevention jobs. Instead, most jobs are distributed across the manufacturing ( 20.6 percent), construction (14.8 percent), and professional, scientific \& technical services (12.1 percent) sectors. Reflecting the variety of jobs in pollution prevention, no occupation accounted for more than 8 percent of the employment. The most common occupations were production workers ( 7.4 percent) and refuse \& recyclable material collectors ( 5.2 percent). The type of industries and range of occupations with green jobs are typical of those we might expect to find in this core area.

Education/training or compliance made up 13 percent of green jobs in this core area $(23,991)$. One third of the jobs in this core area are in public administration ( 33.3 percent), and
18.4 percent are in professional, scientific \& technical services. The most common occupation in this core area is elementary school teachers (except special education), with 15.9 percent of the jobs. Oftentimes, these teachers belong to environmental science and environmental studies programs that focus on environmental cleanup, pollution prevention and related green economy subjects. Although education and training employment also occurs in private-sector organizations, the public sector is the largest employer of educators, and government is typically the largest source of employment in compliance-related jobs. Many of the occupations in this core area do not directly produce green products, however they do provide supporting services in green jobs that contribute to the green economy.

## Environmental cleanup accounts for

 6.4 percent of green jobs ( 11,672 ). Onequarter of the environmental cleanup jobs occur in professional, scientific \& technical services ( 25.2 percent). Other common industries in this core area are construction, with 17.0 percent of the jobs and administrative \& support \& waste management \& remediation services, with 15.8 percent. The occupation accounting for the largest percentage of environmental cleanup jobs is refuse \& recyclable material collectors ( 10.7 percent or 1,253 jobs). This core area represents a fairly specialized function while also relying on a broad range of industries, companies and types of green jobs, ranging from engineering and management to heavy construction and handling of recycled materials. The modest number of green jobs in this core area may reflect its small size relative to other, larger core areas such as energy efficiency.

Harmful emissions reduction is the core area with the smallest number of green jobs $(10,522)$, accounting for 5.7 percent of the state's green employment. Transportation \& warehousing ( 27.1 percent) and retail trade ( 24.5 percent) each cover roughly one-quarter of the jobs in this core area. More than one-quarter of the harmful emissions employment is in the occupation automotive service technicians \& mechanics ( 28.0 percent). Industries and occupations in this core area likely reflect efforts by some industries to reduce equipment and process emissions through alternate fuels, better emissions controls and equipment, or by limiting the use of harmful chemicals, paints or other substances with high levels of volatile organic compounds (VOCs). As with
environmental cleanup, this core area is fairly specialized, which may help explain the modest number of green jobs compared to other core areas.

## Regional Differences in Green Jobs

Green jobs exist across Pennsylvania, though there is wide variation in the number and percentage of green jobs by WIA. This variation likely reflects differences in regional economic conditions including geographic location, population density, industry-sector mix and the labor markets that characterize each WIA. Some main findings by WIA are summarized below:

- Three Rivers WIA has the most current green jobs $(18,318)$ and the second highest employment forecast, with an additional 4,052 green jobs expected within two years.
- South Central WIA also figures prominently in the discussion of green jobs, coming in second in the number of current green jobs $(17,102)$ and third in projected employment $(2,353)$.
- Employers in the Northern Tier and the Southwest Corner WIAs reported the fewest green jobs, at 2,021 and 2,592 , respectively. Projected green employment in the Northern Tier WIA was higher than average (9.2 percent), however this represents an increase of just 395 positions. Projections for the Southwest Corner WIA were very small at 2.5 percent.

Several WIAs have green employment that is heavily based in a single core area:

- In the West Central WIA, 69.9 percent of green employment is in pollution prevention.
- In the Northwest WIA, 57.0 percent of green employment is in energy efficiency.
- More than half of green employment in the Lancaster County WIA is in resource sustainability/renewable energy ( 50.5 percent).

Other WIAs show considerable variation in the percentage of total green jobs employment. In the Southern Alleghenies WIA, green jobs represent 6.8 percent of total employment, the largest proportion of any WIA. Conversely, in the Philadelphia County WIA, only 1.3 percent of regional employment is in green jobs.

## Certifications and Skills

The survey asked employers to report the certifications, green skills and basic skills needed for their green workforce. Because the survey questions in this section were not associated with specific occupations, it was possible to analyze these results by industry sector only.

Certifications: Overall, 5.7 percent of the employers with green jobs reported that they have a certification. The industries with the most certifications were professional, scientific \& technical services ( 13.5 percent of the employers in this industry sector) and construction ( 12.5 percent).

Employers provided many examples of the certifications needed for their green workforces. In many cases, these were certifications needed by all employees in the occupation, not certifications specifically related to the green aspects of the jobs. Many certifications were associated with multiple industries. For instance, LEED AP certification was noted by employers from 10 different industries. This finding seems consistent with the structure and basic work of these leading industries.

Green Skills: Employers provided a range of responses to this question, and the skills cited among industries varied widely. Employers in construction and professional, scientific \& technical services reported the greatest number and variety of green skills. This may be expected, given that these two sectors represent large numbers of green jobs across a variety of occupations.

Many employers interpreted the question on green skills to include general knowledge requirements for their green workforce, as well as specific work skills. Understanding state and federal laws, policies, and regulations that apply to a specific industry sector was frequently cited as a green skill need.

Basic Skills: Overall, the basic skills needed by employees in green jobs are very similar to the skills needed by all employees in the industry sector, whether green or not. Some responses linked skills to specific kinds of occupations, but in general, employers' responses ranged from personal attributes and general aptitudes to academic skills, college degrees and licenses. These results suggest that some employers interpreted "basic skills" as encompassing the essential prerequisites of the job and not simply as rudimentary academic skills.

## Future Research

The survey design establishes a reliable scientific foundation for identifying green jobs in Pennsylvania. The study benefitted from reviews of other green jobs research, related research conducted by Labor \& Industry, and structured input received from experts and many stakeholders. As with any research project, there are opportunities for improvement.

The following enhancements are suggested:

- Repeat the green jobs survey every two to three years in order to assess growth in green jobs and the industries that support them.
- Conduct further research linking specific occupations to certifications, basic skills and green skills needed by employers and the workforce.
- Continue to conduct targeted studies by core area, industry sector and occupation to determine key growth factors and the education and training needs of employers and employees in the green economy.
- Compare and contrast the findings of this and future green jobs research to the broader economy to assess the total economic effects of green jobs and industry-sector growth in different regions of the state.

## Survey Form

## Detailed Methodology

## Sample Universe

The sample universe was all establishments with more than zero employees in the 4th quarter of 2009. Multiestablishment employers were included via their parts, so multi-master accounts were excluded. The establishments' North American Industry Classification System (NAICS) code was used to exclude private households (NAICS 814110) and certain government functions including prosecutor's offices, courts, jails, parole officers, police \& firefighters (NAICS 922).

## Sample Stratification

The universe was stratified into 20 strata according to major sector NAICS. This was generally a two-digit NAICS except for the major groups ( $31-33,44-45$, and 48-49). All government regardless of NAICS was put into sector 92. This was further stratified if the six-digit NAICS matched the presumed-green list or not. Presumed-green NAICS only occurred in seven NAICS sectors, so there were 27 strata total. The presumed-green strata were sampled with a 1.3 percent uncertainty rate, and the rest were sampled with a 3.2 percent uncertainty rate with a 95 percent confidence level for categorical data.

## Sample Selection

The sample sizes for each stratum were defined based on the above procedure. The SAS software (proc SURVEYSELECT) was used for sample selection and estimation. The size of each primary sampling unit (PSU) is defined by the average covered employment in the 4th quarter of 2009. When size was specified, the default selection method was probability proportional to size without replacement (PPS). This method is more complex than selection with replacement but provides the ability to produce more accurate estimations. The estimated size for the presumed-green part of Utilities was very close to the universe so the universe for this stratum was selected for sample. Units with more than 200 employments were included with certainty. Under the PPS method of sample selection for each stratum, the relative size of each sampling unit must not exceed ( $1 /$ SAMPSIZE). To avoid these errors
we used option MAXSIZE, which limits each PSU for probability selection by a given number. MAXSIZE cannot be larger than certainty size, but for some cells to avoid probabilities errors we used MAXSIZE significantly lower than certainties. To avoid extreme weights for small units, we used another option, MINSIZE, which interprets each sampling unit of a size less than MINSIZE as equal to the MINSIZE number for probabilities of selection. The MINSIZE was uniform for all strata and equal to eight.

The total of 25,557 PSU, with good spread across the areas, was selected as a sample.

| Sample 25,557 |  |  |  |  |  |  |  |  |  |
| Deletions 2,955 |  |  |  |  |  |  |  |  |  |
| Surveys 1 | 14,619 |  |  |  |  |  |  |  |  |
| Participation 6 | 64.7\% |  |  |  |  |  |  |  |  |

## Weights and Adjustments

Within the total responses, 2,794 were invalid or refusals (see statistical Table 14 in the Appendix) and 14,619 were considered to be valid responses and were used for the estimations. Some companies reported numbers of green jobs larger than the total numbers of jobs used in the sample selection. Seasonal differences in employment, non-covered employment, etc. could be valid reasons for such reports. However, in some cases, it could be that the reported unit included some multi-units, while in the selection we used the single units. The survey group made all possible efforts to split multi reports to a single PSU. For cases where green employment was still larger than the employment size used for selection, the initial weights were adjusted down based on reported employment. We can call these weights primary weights.

To account for missing values (non-responses and non-valid responses), we initially assumed that for each stratum they would have the same distribution as the responded PSU with valid responses. Based on this assumption, primary weights
were adjusted for missing values. (Let's call them secondary weights). Direct use of secondary weights would probably lead to overestimations due to the assumption of the same ratios of green jobs for the responding and non-responding companies and would create some extremely high weights for some PSUs. To compensate for that and to avoid extreme outliers we established upper limits on secondary weights, based on the assumption that the weighted means for each stratum should be somewhere close to reported means. Final weights were produced by applying the upper limits to the secondary weights.

## Survey Estimations

The size of the selected sample is a significant portion of the total number of available units in the universe, especially for the presumed-green strata. This fact, along with the sampling selection without replacement, justifies the use of the finite population adjustment option for variance estimations. This option creates decreasing relative variance (estimations errors) by about $1 / 3$ for aggregated estimations of total numbers of green jobs and green jobs by activities.

In other words, without finite population adjustment, relative errors would be about 50 percent larger for the aggregated estimations of totals.

To verify our variance estimations with respect to possible biases in distributions, we additionally tested them with two resampling procedures: Jacknife and Bootstrap. Jacknife is the standard default option for sample replication in proc SURVEYMEANS when resampling is produced by cutting one observation each time. Consequently, the number of resamplings is equal the number of responses. For Bootstrap resampling, we used proc MULTTEST. This procedure produces resampling with replacement independently for each stratum, and the number of resamplings could be specified. The Jacknife procedure directly produces the same statistics as standard (TAYLOR) estimations in proc SURVEYMEANS.

The direct intention of Bootstrap in proc MULTTEST is to produce adjustments of $p$-values for hypothesis tests. However, one of the optional outputs with all resamples could be used to estimate standard deviations for the estimated totals.

Both resampling approaches exclude using finite population adjustment. Consequently, to estimate the impact of possible biases in the distribution on estimated errors we compared the resampling results with standard (TAYLOR) estimations without finite population adjustment. Due to limited computer power, we produced this testing only for a few selected strata. The results show insignificant differences between variance estimations using standard (TAYLOR) estimations and using resampling approaches. These differences are far less than the impact of finite population adjustment for TAYLOR estimations. This fact justified using standard (TAYLOR) estimations with finite population adjustment as the primary tool for all variance estimations.

The Bootstrap option of the MULTTEST procedure was directly used to test the hypothesis of differences (Contrast) in the green jobs shares for the presumed-green NAICS and all other NAICS for totals and for each of the seven used two-digit strata, which include green and non-green parts.

[^8]Estimations were requested for the different groups (WIA areas, six-digit NAICS, presumed-green and non-green subpopulations). SAS suggests using the DOMAIN statement for this type of estimation. "The DOMAIN statement names the variables that indentify domains, which are called domain variables. It is common practice to compute statistics for domains. The formation of these domains might be unrelated to the sample design. Therefore, the sample sizes for the domains are random variables. In order to incorporate this variability into the variance estimations, you should use a DOMAIN statement". ${ }^{19}$

Variance estimations for all used DOMAINS as well as lower and upper limits for 95 percent confidence levels are available and could be provided upon request.

## Estimations of Forecasted Employment

The survey requested an estimate of future employment. All forecasts are direct estimations from this survey and do not represent any attempt of forecasting based on time series, econometric models etc.

Not all reported green jobs employers reported forecast estimations. Consequently, the estimated base employment would be incomparable with the estimated forecasted employment. To resolve this issue, we introduced a new group of estimating variables, which constitute the base employment for reporters with reported forecasts. These new variables are comparable with forecasts. The subtotals for the estimated new variables are compared with forecasted subtotals for each estimated group (DOMAINS), and the growth rate is applied to the estimated base employment to come up with comparable forecasts. The results are reported as forecasts.

## Estimated Grand Totals

The estimated total number of green jobs for Pennsylvania State is 183,029 , which represents 3.37 percent of the total jobs in universe. This is consistent with the share of 3.4 percent reported (not weighted) jobs from the totals of all reporters. The coefficient of variation for the estimated total green jobs is 2.9 percent, which means that with a 95 percent confidence level, the low estimation is 172,537 and the high is 193,520 .

## Breakdowns by Green/Non-Green Industry Sectors

Prior research identified a series of industries that were expected to be the major sources of green jobs in Pennsylvania. This study found that overall the "presumed green" industries did, in fact, hold significantly more green jobs than the non-green industries. For instance, within administrative \& support \& waste management, almost 30 percent of jobs in the presumed green industries were green, compared to less than 3 percent in the presumed nongreen industries (Table 9). These findings were statistically significant for the following sectors:

- Construction,
- Professional, scientific \& technical services,
- Administrative \& support \& waste management \& remediation services, and
- Public administration.

In a few sectors, the green jobs were distributed fairly equally between the presumed green and non-green industries. In these cases, the amount of green employment was not significantly different between the presumed green and non-green industries. These sectors were the following:

- Manufacturing,
- Utilities, and
- Agriculture, forestry, fishing \& hunting.

## Table 9

Estimated and Forecast Green Employment by Green and Non-Green Industry Sectors

|  |  | PRESUMED NON-GREEN INDUSTRIES |  |  |  | PRESUMED GREEN INDUSTRIES |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| NAICS | INDUSTRY SECTOR | GREEN EMPL. | PERCENT OF TOTAL INDUSTRY EMPL. THAT IS GREEN | FORECAST GREEN EMPL. | ANNUAL GROWTH RATE FOR GREEN EMPL. | GREEN EMPL. | PERCENT OF TOTAL INDUSTRY EMPL. THAT IS GREEN | FORECAST GREEN EMPL. | ANNUAL GROWTH RATE FOR GREEN EMPL. |
| 11 | Agriculture, Forestry, Fishing \& Hunting | 757 | 8.9\% | 573 | -13.0\% | 1,557 | 10.8\% | 1,340 | -7.2\% |
| 21 | Mining, Quarrying, \& Oil \& Gas Extraction | 2,577 | 11.6\% | 2,786 | 4.0\% |  |  |  |  |
| 22 | Utilities | 1,737 | 12.3\% | 2,039 | 8.3\% | 1,005 | 13.3\% | 1,412 | 18.5\% |
| 23 | Construction | 9,732 | 11.3\% | 11,461 | 8.5\% | 31,849 | 23.5\% | 37,133 | 8.0\% |
| 31-33 | Manufacturing | 34,237 | 6.5\% | 35,127 | 1.3\% | 3,520 | 9.9\% | 4,755 | 16.2\% |
| 42 | Wholesale Trade | 8,206 | 3.7\% | 9,545 | 7.8\% |  |  |  |  |
| 44-45 | Retail Trade | 17,117 | 2.7\% | 19,248 | 6.0\% |  |  |  |  |
| 48-49 | Transportation \& Warehousing | 8,196 | 4.1\% | 8,827 | 3.8\% |  |  |  |  |

| 52 | Finance \& Insurance | 2,351 | 0.9\% | 2,487 | 2.8\% |  |  |  |  |
| 53 | Real Estate \& Rental \& Leasing | 2,627 | 4.4\% | 4,489 | 30.7\% |  |  |  |  |
| 54 | Professional, Scientific, \& Technical Services | 3,383 | 1.6\% | 4,753 | 18.5\% | 18,535 | 19.8\% | 22,707 | 10.7\% |
| 55 | Management of Companies \& Enterprises | 2,244 | 2.0\% | 2,328 | 1.9\% |  |  |  |  |
| 56 | Admin. \& Support \& Waste Mgmt. \& Remediation Svcs. | 6,065 | 2.4\% | 7,164 | 8.7\% | 2,717 | 29.9\% | 2,819 | 1.9\% |
| 61 | Educational Services | 2,371 | 1.3\% | 2,603 | 4.8\% |  |  |  |  |
| 62 | Health Care \& Social Assistance | 1,151 | 0.1\% | 1,006 | -6.5\% |  |  |  |  |
| 71 | Arts, Entertainment, \& Recreation | 915 | 1.2\% | 797 | -6.7\% |  |  |  |  |
| 72 | Accommodation \& Food Services | 1,438 | 0.4\% | 1,970 | 17.0\% |  |  |  |  |
| 81 | Other Services (except Public Administration) | 4,954 | 2.8\% | 5,018 | 0.6\% |  |  |  |  |
| 92 | Public Administration | 9,112 | 1.4\% | 9,006 | -0.6\% | 3,428 | 13.6\% | 3,401 | -0.4\% |
| Total |  | 120,418 | 2.4\% | 132,381 | 4.8\% | 62,611 | 19.5\% | 73,971 | 8.7\% |

## Appendices

The study examined the common green occupations in the industries that were not expected to have a high concentration of green employment (Table 10). The most common green occupations in the presumed non-green industries were production workers (all other), retail salespersons, and automotive service technicians \& mechanics.

## Table 10

Top 25 Green Occupations in Presumed Non-Green Industries

| SOC | OCCUPATION TITLE | GREEN EMPLOYMENT | PERCENT OF TOTAL INDUSTRY EMPLOYMENT THAT IS GREEN |
| :---: | :---: | :---: | :---: |
| 51-9199 | Production Workers, All Other | 9,057 | 7.5\% |
| 41-2031 | Retail Salespersons | 5,369 | 4.5\% |
| 49-3023 | Automotive Service Technicians \& Mechanics | 4,836 | 4.0\% |
| 25-2021 | Elementary School Teachers, except Special Education | 3,856 | 3.2\% |
| 51-4199 | Metal Workers \& Plastic Workers, All Other | 3,336 | 2.8\% |
| 47-2031 | Carpenters | 3,084 | 2.6\% |
| 37-3011 | Landscaping \& Groundskeeping Workers | 2,897 | 2.4\% |
| 53-3022 | Bus Drivers, School or Special Client | 2,895 | 2.4\% |
| 49-9071 | Maintenance \& Repair Workers, General | 2,664 | 2.2\% |
| 53-3032 | Heavy \& Tractor-Trailer Truck Drivers | 2,642 | 2.2\% |
| 53-3033 | Light Truck or Delivery Services Drivers | 2,523 | 2.1\% |
| 41-3099 | Sales Representatives, Services, All Other | 2,447 | 2.0\% |
| 41-4012 | Sales Reps., Wholesale \& Manufacturing, except Technical \& Scientific Products | 2,383 | 2.0\% |
| 51-7042 | Woodworking Machine Setters, Operators, \& Tenders, except Sawing | 2,132 | 1.8\% |
| 53-7062 | Laborers \& Freight, Stock, \& Material Movers, Hand | 2,128 | 1.8\% |
| 51-2099 | Assemblers \& Fabricators, All Other | 2,023 | 1.7\% |
| 43-9061 | Office Clerks, General | 1,995 | 1.7\% |
| 53-7051 | Industrial Truck \& Tractor Operators | 1,897 | 1.6\% |
| 47-2152 | Plumbers, Pipefitters, \& Steamfitters | 1,840 | 1.5\% |
| 25-2031 | Secondary School Teachers, except Special \& Career/Technical Education | 1,825 | 1.5\% |
| 25-2022 | Middle School Teachers, except Special \& Career/Technical Education | 1,807 | 1.5\% |
| 51-8031 | Water \& Wastewater Treatment Plant \& System Operators | 1,622 | 1.3\% |
| 47-2061 | Construction Laborers | 1,566 | 1.3\% |
| 47-2121 | Glaziers | 1,509 | 1.3\% |
| 41-3021 | Insurance Sales Agents | 1,375 | 1.1\% |
| Total |  | 69,708 | 57.9\% |

Among the industries that were expected to have green jobs, the most common occupations were heating, air conditioning, \& refrigeration mechanics \& installers, electricians, and carpenters (Table 11).

## Table 11

Top 25 Green Occupations in Presumed Green Industries

| SOC | OCCUPATION TITLE | GREEN EMPLOYMENT | PERCENT OF TOTAL INDUSTRY EMPLOYMENT THAT IS GREEN |
| :---: | :---: | :---: | :---: |
| 49-9021 | Heating, Air Conditioning, \& Refrigeration Mechanics \& Installers | 6,685 | 10.7\% |
| 47-2111 | Electricians | 5,825 | 9.3\% |
| 47-2031 | Carpenters | 4,659 | 7.4\% |
| 17-2051 | Civil Engineers | 3,480 | 5.6\% |
| 47-2061 | Construction Laborers | 3,046 | 4.9\% |
| 17-1011 | Architects, except Landscape \& Naval | 2,379 | 3.8\% |
| 53-7081 | Refuse \& Recyclable Material Collectors | 2,372 | 3.8\% |
| 17-2081 | Environmental Engineers | 2,240 | 3.6\% |
| 47-2152 | Plumbers, Pipefitters, \& Steamfitters | 2,184 | 3.5\% |
| 11-9021 | Construction Managers | 1,544 | 2.5\% |
| 47-2181 | Roofers | 1,340 | 2.1\% |
| 47-1011 | First-Line Supervisors of Construction Trades \& Extraction Workers | 1,162 | 1.9\% |
| 45-2092 | Farmworkers \& Laborers, Crop, Nursery, \& Greenhouse | 1,135 | 1.8\% |
| 17-2071 | Electrical Engineers | 1,016 | 1.6\% |
| 17-2141 | Mechanical Engineers | 1,004 | 1.6\% |
| 17-3011 | Architectural \& Civil Drafters | 920 | 1.5\% |
| 51-9061 | Inspectors, Testers, Sorters, Samplers, \& Weighers | 845 | 1.3\% |
| 19-2041 | Environmental Scientists \& Specialists, Including Health | 828 | 1.3\% |
| 11-9041 | Architectural \& Engineering Managers | 651 | 1.0\% |
| 43-4051 | Customer Service Representatives | 645 | 1.0\% |
| 47-2211 | Sheet Metal Workers | 632 | 1.0\% |
| 19-4093 | Forest \& Conservation Technicians | 626 | 1.0\% |
| 43-9061 | Office Clerks, General | 599 | 1.0\% |
| 51-2022 | Electrical \& Electronic Equipment Assemblers | 589 | 0.9\% |
| 17-3029 | Engineering Technicians, Except Drafters, All Other | 553 | 0.9\% |
| Total |  | 46,958 | 75.0\% |

## Table 19

Examples of Green Skills and Knowledge Reported by Employers by NAICS Industry Sector ${ }^{27}$

| NAICS | INDUSTRY SECTOR | EXAMPLES OF GREEN SKILLS AND KNOWLEDGE REPORTED BY EMPLOYERS |
| :---: | :---: | :---: |
| 11 | Agriculture, Forestry, Fishing \& Hunting | Composting; organic crop pest control and vegetable production; soil science; sustainability |
| 21 | Mining, Quarrying, \& Oil \& Gas Extraction | Hazmat training; reclaiming; restoration; MHSA training; knowledge of laws on extraction and restoration |
| 22 | Utilities | Emissions reduction, monitoring and reporting; energy efficiency; sewer treatment operations; understanding environmental regulations |
| 23 | Construction | Energy auditing; energy efficiency product knowledge; knowledge of energy laws; installing geothermal products, solar products, windmills, high efficiency HVAC equipment, insulation upgrades, fiber optic wiring, and on-demand water heaters; green building design; pollution prevention; recycling; reclamation; wind design |
| 31-33 | Manufacturing | Knowledge of DEPA and EPA regulations; chemical process technology; biodiesel manufacturing; environmental engineering; instrumentation control technology; spill prevention |
| 42 | Wholesale Trade | Green product knowledge; knowledge of manufacturing processes; able to provide contractors/ engineers with green training |
| 44-45 | Retail Trade | Product knowledge; application of fertilizers and pesticides |
| 48-49 | Transportation \& Warehousing | Energy auditing; green cleaning practices; pollution prevention; renewable energy specifications development |
| 53 | Real Estate \& Rental \& Leasing | Green building design; solar knowledge |
| 54 | Professional, Scientific, \& Technical Services | Home inspections; energy audits; agronomy; architectural design; Best Management Practices; building energy use modeling software; civil engineering; conservation design; design ecosystem restoration and stream bank stabilization projects; design sustainable energy systems; design sustainable water treatment systems; knowledge of environmental assessment, codes and regulations; geo-engineering; instrumentation skills; weatherization; wetland identification; knowledge of grant funding for green improvements |
| 55 | Management of Companies \& Enterprises | Energy auditing; green education and marketing; alternative energy options |
| 56 | Administrative \& Support \& Waste Management \& Remediation Services | Chemistry; energy efficiency; recycling; solid waste collection; resource management; spillage clean-up; water testing; pest control |
| 61 | Educational Services | Auto emissions training; chemical engineering; civil engineering; custodial/maintenance training; environmental science; environmental management; hazardous materials and assessments; plant types and care; solar training; weatherization training; hydrology |
| 62 | Health Care \& Social Assistance | Energy efficiency; paper recycling; resource sustainability |
| 71 | Arts, Entertainment, \& Recreation | Public display botanical gardens; clean stream knowledge; sustainability practices; horticulture |
| 72 | Accommodation \& Food Services | Recycling; pond and stream pollution control; electrical skills; mechanical skills |
| 81 | Other Services (except Public Administration) | Erosion and sedimentation control; hazardous materials awareness; sustainable green printing; safe practices regarding automotive body/paint; knowledge of governmental policies and regulations |
| 92 | Public Administration | Energy auditing; irrigation; environmental regulations and litigation; hazardous materials; knowledge of USDA conservation programs; maintenance of water distribution systems; resource management; knowledge of LEED; wastewater; weatherization |

${ }^{27}$ No employers in industry sectors 51 (Information) or 52 (Finance and Insurance) reported any green skills or knowledge needs on the survey.

Table 20
Examples of Basic Skills and Knowledge Reported by Employers by NAICS Industry Sector

| NAICS | INDUSTRY SECTOR | EXAMPLES OF GREEN SKILLS AND KNOWLEDGE REPORTED BY EMPLOYERS |
| :---: | :---: | :---: |
| 11 | Agriculture, Forestry, Fishing \& Hunting | Equipment maintenance; crop culture knowledge; diesel mechanic; drivers license; Forest Technician Degree; horticultural knowledge; safety training; ability to work in heat; PA Emission Inspection License |
| 21 | Mining, Quarrying, \& Oil \& Gas Extraction | Geothermal well drilling; heavy equipment operator; rigger training; engineering principles; drug free; journeyman electrician license |
| 22 | Utilities | Combustion theory; electrical skills; math; mechanical ability; computer skills; Environmental Engineering Degree; Sewer Operator License |
| 23 | Construction | Air conditioning system design; asbestos training; basic carpentry skills; blueprints; computer skills; drafting capability; electrical knowledge; general plumbing experience; HVAC skills; oil refining skills; power plant skills; able to follow instructions; Architectural Drafter Degree; construction safety training |
| 31-33 | Manufacturing | Project management; backhoe operator; chemical knowledge; mechanical aptitude, welding; electrical skills; Electrical Engineering Degree; safety awareness; Wastewater Technician Degree; math; reading |
| 42 | Wholesale Trade | Good work ethic; Engineering Degree; alternative energy product knowledge |
| 44-45 | Retail Trade | Customer service; cash register operations; mechanically inclined; GM product training; social skills |
| 48-49 | Transportation \& Warehousing | CDL Class A/B; project management; IT skills; diesel trained; environmental emergency response |
| 51 | Information | Broadcasting experience; editorial skills; printing press operation knowledge |
| 52 | Finance \& Insurance | Knowledge of financial services; Broker License; written/verbal communication; math |
| 53 | Real Estate \& Rental \& Leasing | Maintenance; clerical; janitorial; Professional Recycling of PA (PROP); math, reading and writing; Real Estate License |
| 54 | Professional, Scientific, \& Technical Services | Architectural Degree; basic landscaping; bio/physical chemistry process design; carpentry; Civil Engineering Degree; Economics Degree; field investigation; GIS; accuracy; honesty; member of American Society of Architectural Illustration; CDL Class A; Microsoft Excel and Word |
| 55 | Management of Companies \& Enterprises | Communications Degree; return on investment calculations; Environmental Engineering Degree; knowledge of appliances |
| 56 | Administrative \& Support \& Waste Management \& Remediation Services | CDL Class A/B/C; health and safety training; logging pick-ups; mold removal; reliability; clean driving record; customer service; math; able to lift 50 lbs |
| 61 | Educational Services | Architectural Degree; Association of Physical Plant Administrator; computer skills; Environmental Science Degree; public relations; teaching; math; physics |
| 62 | Health Care \& Social Assistance | Knowledge of landscaping equipment; able to work outdoors under extreme conditions |
| 71 | Arts, Entertainment, \& Recreation | Canoe Safety License; CPR; venom training; reading; writing; pruning; guiding tours; lecturing |
| 72 | Accommodation \& Food Services | Chemical application; control run-off; maintenance and facilities skills |
| 81 | Other Services (except Public Administration) | General automotive repair, mechanical ability; diesel mechanic; AC Unit License; physically fit |
| 92 | Public Administration | Cartography/GIS; Commonwealth Operators Permit; budgeting; basic construction skills; Environmental Science Degree; computer skills; grant writing and administration; maintain records; Municipal Industrial Treatment Plan Administrator |

## Table 21

Certifications Reported by Employers in Each Industry Sector (Two-Digit NAICS Code)
Note: This table lists the certifications as they were reported by the employers. This is the raw data, unduplicated by distinct certification title. Duplication will appear where employers provided different titles for the same certification.

| 11 - Agriculture, Forestry, Fishing \& Hunting |
| :--- |
| Agronomy Certification |
| Application Certifcation |
| ASC Conservation Guidelines |
| Certified Crop Advisor |
| Certified Private Pesticide License |
| Creamery Certified |
| EPA Certified |
| Farm Services Certification |
| Fertilizer Certification |
| Herbicide Certification |
| Live Roof Certification |
| Organic Certified |
| Organic Farmer Certification |
| Pesticide Applicator License |
| Pesticide Certification |
| Pesticide Certification in Future |
| Pesticide Certified/Training |
| Pesticide License |
| SFI |
| Sustainable Forest Initiative Certification |
| 21 - Mining |
| Certified Welder |
| DOT License |
| EPA Certified |
| First Aid |
| Heavy Equipment Operator Certified |
| IGSHPA Certification |
| Mine Safety and Health Administration Certification |
| OSHA |
| OSHA Certification |
| Safety Certification |
| Safety Courses |
| Well-Control School Certification (Driller) |
| 22 - Utilities |
| Carbon Reduction Certification |
| Certified Energy Manager |
| G6 |

| Certified Welder |
| :--- |
| NIULPE Class I or II License |
| OSHA |
| PA Sewage Enforcement Certification |
| PE (Optional) |
| Professional Engineer |
| Safety |
| Sewer Operator License |
| State Certifications |
| Visible Emissions Certification |
| Water Treatment Plant Operator Certification |
| Water Works Operator Certificate (Class A; Type 1) |
| 23 - Construction |
| ACI Certification |
| Asbestos Certification |
| Boiler Certification |
| BPI Certification |

## SURVEY FORM

## COMMONWEALTH OF PENNSYLVANIA GREEN JOBS SURVEY

CENTER FOR WORKFORCE INFORMATION \& ANALYSIS

## ABOUT THE SURVEY

The U.S. Department of Labor is taking a multi-state approach in refining its industry and occupational descriptions to keep up with the rapidly evolving green economy. As one of the states selected for a federal award in this national effort, Pennsylvania is partnering with the Washington State Employment Security Department to conduct an economy-wide employer survey. The goal of this partnership is to develop a green workforce, and we need our employers' help.

This survey will give us a baseline for the current number of green jobs and expected job growth, and help us identify unique green skill requirements. The data collected will be targeted to workforce development practitioners and educators to help them prepare businesses and job seekers for opportunities within the green economy. It is vital that our state aligns our public policy investments with your business activities so that we benefit from this dynamic change in Pennsylvania's economy.

Pennsylvania defines green jobs as jobs that employ workers in producing or offering products or services that:

1. Promote energy efficiency;
2. Contribute to the sustainable use of resources or renewable energy;
3. Prevent pollution;
4. Clean up the environment;
5. Promote the reduction of harmful emissions; and
6. Provide green education/training, awareness, or compliance.

## COMPLETING THE SURVEY

- Please direct this survey to your Operations Manager or Human Resources Department.
- Include information about the location shown on the address label above.
- Return the survey in the enclosed postage-paid envelope, or
- Fax both sides to (360) 438-3215, or
- Contact us at (800) 837-3074 to report by telephone or receive answers to your questions.
- Please respond before August 13, 2010.
- All information will be treated confidentially.

## CONTACT PERSON

## PLEASE REPORT FOR THE LOCATION LISTED ON THE ADDRESS LABEL

How many employees do you currently have at this location?

Do you provide goods or services in any of the six core areas as listed above?

Yes $\qquad$ No $\qquad$
If 'Yes,' please complete back of survey.
If 'No' stop here and mail or fax back the survey.

## COMMONWEALTH OF PENNSYLVANIA GREEN JOBS SURVEY

## Please enter information for the past three months' business activities only.

## SECION 1: Total Number of Employees and Job Tifles Related to Six Core Areas

- Enter total number of employees for each job title and the main core area in which they work. Choose only one core area per employee.
- Please estimate how many employees will work in the six core areas as their primary focus two years from now.
- Exclude consultants, outside contractors, vendors, and others not considered employees.

| Job Title Related to Core Area | Total No <br> of Current <br> Employees <br> in Position | Estimated No. <br> of Employees <br> in Position in <br> Two Years | Number of <br> Curent <br> Employees | Number of <br> Current <br> Employees | Number of <br> Curent <br> Employees | Number of <br> Current <br> Employees | Number of <br> Current <br> Employees |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Example: Civil Engineer | 3 | 4 |  | 2 |  |  | Number of <br> Curent <br> Employees |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |

SECIION 2: List any green skills, basic skills, or certifications needed for your green workforce.

| Green Skills | Basic Skills | Certifications |  |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
| Thank you for your participation by August 13, 2010. |  |  |  |
|  |  |  |  |

If more space is needed, please contact us for another copy or make a photocopy of this page.
For more information on Pennsylvania's Green Survey, please call (800) 837-3074; Fax: (360) 438-3215
Washington State Employment Security Department, Labor Market and Economic Analysis; PO Box 9046 Olympia, WA 98507-9046

[^0]:    2 The Pennsylvania green jobs report, part 1, January 2010: Pennsylvania Department of Labor and Industry.

[^1]:    5 The data referenced in Table 15 is rounded.

[^2]:    6 Total employment is based on 2009 fourth quarter covered employment among the universe of employers used for sampling. This file excluded NAICS 922xxx and 814110. Covered employment means jobs that are covered by unemployment insurance.

[^3]:    7 Due to rounding, the estimated total green construction jobs are slightly different than the sum of the green employment in the core areas.
    8 Dashes are placed where no employers indicated that they had green jobs in that particular core area. In these cases, no estimates of employment have been computed.

[^4]:    ${ }^{10}$ Dashes are placed where no employers indicated that they had green jobs in that particular core area. In these cases, no estimates of employment have been computed.

[^5]:    12 Total employment is based on 2009 fourth quarter covered employment among the universe of employers used for sampling. This file excluded NAICS $922 x x x$ and 814110.

    13 "Other" consists of firms with green jobs in more than one area.

[^6]:    15 See: The Pennsylvania green jobs report, part 1, January 2010: Pennsylvania Department of Labor \& Industry; Greening Pennsylvania's labor market information: Findings from listening sessions with employers and educators, June, 2010: Pennsylvania Department of Labor \& Industry.
